

EBS Telepractice WORKS!

"Since EBS introduced telepractice as a service delivery model, my daughter has been much more engaged during her therapy sessions and fully embraces the technology. She has improved significantly in such a short period of time. I highly recommend teletherapy!"

Michelle J.

Parent of a 7th grade student

What is Telepractice?

Telepractice allows students to directly interact with dedicated and certified telepractitioners using live video conferencing. Our professionals have received specialized training from EBS to be certified as telepractitioners who engage and motivate students through interactive telepractice services. The services are not automated or provided through a recording. During teletherapy sessions, the student and professional can see, hear, and interact with one another in real time, using a secure webcam and headsets, in a live online shared learning environment. If you've ever used Skype on your computer or FaceTime on your iPhone, you've used a similar type of technology. What should you and your child expect? The same high quality services that the student would receive on-site!

How will Telepractice be Implemented?

We believe that consistent, individualized and evidence-based therapy practices are the key to your child's communicative success. Our telepractitioners use activities and therapy strategies with technology to deliver high quality services and support bridging the gap between communication and academic success. Your child will participate in scheduled sessions according to his or her Individualized Education Plan (IEP), and each scheduled session will be designed to address the specific goals and objectives in the IEP. Thanks to EBS Telepractice, your child will access secure, HIPPA compliant, evidence-based, best practices from a certified professional

Why is Telepractice the Optimal Solution?

By utilizing digital technology in a fun and engaging format, teletherapy is exceptionally kid-friendly. Today's children are comfortable with computers and love game-based activities such as video interactions and digital learning. In this rapidly developing technological world of ours, the digital dimensions of online therapy, telehealth, and online university classes have become very natural and almost expected. For many children, teletherapy is less intimidating than the traditional face-to-face therapy and has been shown to drive even better results for some.

Proven Results

Telepractice is an evidence-based service delivery model. It has been proven in numerous academic studies to be an effective and engaging method of providing specialized instructional services, and students love it! Our EBS certified teletherapists are experts in the field. EBS teletherapy proves to be effective in helping students reach their goals.

An overwhelming amount of research over the last 20+ years has shown an increase in effectiveness in schools with high satisfaction rates from parents, students, and therapists. There is no compromise in the quality of the therapist or services.

Backed by Nationally Recognized Associations

Fatima Hassan, M.S., CCC-SLP
Regional Director

"Fusing technology with clinical skills, transmitting your heart, passion and energy during each online therapy session and focusing on the end goal allows for Teletherapy to bridge a gap in providing direct services. This service delivery model can reach more students, add value in supporting their communicative potential and make a difference for their academic success. Implementing evidence-based practices and using an extensive library of tools to make smarter, more informed decisions help improve outcomes and expand clinical capacity. As a Speech-Language Pathologist, my commitment is to support my students and provide the tools they need in reaching their maximum potential."
